

# Physics 121 Course Syllabus - Spring 2018

## Instructor:

- Camelia Prodan, PhD: T-480, [cprodan@njit.edu](mailto:cprodan@njit.edu)
- Office hours: Tuesdays 11.30am-1pm. Other times by appointment.

Mastering Physics course identifier code **MPPRODAN01456**

## General Information:

**Description:** Physics 121 is a calculus-based introduction to electricity and magnetism, emphasizing fundamental concepts and applications. It is the second course in a three course sequence. The topics covered are listed below.

### Pre-requisites (all with grade of C or better):

- Physics 111 or 111H, and Math 111, 111H, or Math 132 (Calculus-I).

### Co-requisites:

- Physics 121A (the lab course) and Math 112 (Calculus-II).

Physics 121A Laboratory must be taken along with Physics 121 unless it has been passed previously. A student who drops Physics 121 automatically drops the lab (and vice versa, no exceptions). Physics 121A is otherwise a totally separate course from Physics 121 in that the lab instructors set the requirements and grades. The lab manual (Physics 121A Laboratory Manual 7th Edition) can be purchased at the NJIT bookstore. The most up-to-date lab schedule will be posted at <http://web.njit.edu/~smm8166>.

## Learning Expectations, Goals, Outcomes:

Students will be expected to demonstrate understanding and mastery of calculus-based classical electricity and magnetism up to AC circuits, not including Maxwell's Equations or beyond. The topics covered include electric charge, electric and magnetic fields, forces on stationary and moving charges and currents due to electrostatic and magnetic fields, electrostatic potential and potential energy, Gauss' Law, capacitance, current, resistance, DC circuits, the Biot-Savart Law, Ampere's Law, Faraday's Law, inductance, RC circuits, LR circuits, LCR circuits, AC circuits including "phasor diagrams" and resonant oscillations.

In any/all of the above subject areas, students should be able to do the following:

- Recall and use the conceptual and mathematical definitions and be able to explain them.
- Understand the conceptual and mathematical relationships between quantities used.
- Explain and manipulate equations and techniques developed in the text, lectures, problem examples, and in the course of working problems.
- Use symmetry arguments, sketches and diagrams, graphs, field sketches, algebra, trigonometry, and basic integral and differential calculus methods for reasoning about nature and in setting up and solving textbook-level problems.
- Critically evaluate the soundness and precision of their own answers, explain and interpret their solutions to problems in a way that shows understanding, and identify and appraise the range of applicability of their results, and state limitations of their solutions.
- Apply the skills above to successfully solve textbook-level problems with numeric, symbolic, or conceptual answers.

Learning outcomes are assessed by means of 3 common exams, a final exam, scores on homework assignments, in-class quizzes, and class participation scores.

## Materials for Physics 121:

- **Textbook (Abbreviation: Y&F):** "University Physics", 13th Edition, authors Young & Freedman (Pearson 2012). We use Chapters 21 to 31 in Volume 2, which are published as bound books or 3 hole binder or E-text versions. We will not be using the 14<sup>th</sup> Edition of the text. The NJIT bookstore will have hard copy texts bound with the access code and E-text kit - ISBN = 0321928814 or 9780321928818). Any other version of the text containing Chapters 21 - 31 is OK. Many students use the E-text.
- **Mastering Physics Online Homework System:** Each student must obtain an access code kit that permits use of the online homework system. In addition to having an access code, each student must enroll in the Mastering Physics (MP) course for his/her Physics 121 section using a course identifier code **MPPRODAN01456**. Homework assignments will be posted on-line in Mastering Physics and will be automatically graded. Specific information will

be available directly from all the instructors, and/or their web sites. Any access code kit must be for the right text, specified above, so check before buying.

- **Web Sites:** Practice problems, <http://web.njit.edu/~janow>.  
**Moodle: grades and announcements will be posted in Moodle.**

## Grading

**Final Letter Grades** will be based on a **term average** for the semester's work that includes the three common exam scores, the final exam, the term's homework score, in-class quiz scores, and measures of participation related to clicker use and attendance. Here are the approximate weights to be used for calculating term averages:

- 48% for all three common exams (16% each)
- 32% for the final exam
- 20% for the total of homework

The conversion of term average values to letter grades will use the following cutoff values:

- 85% for A, 75% for B+, 65% for B, 56% for C+, 50% for C, and D or F below 50%.

**Examinations:** There will be three multiple choice Common Exams plus a comprehensive multiple choice Final Exam. Extra credit problems will not be offered on any of these. The schedule is:

- |  |                |
|--|----------------|
| ▪ Common Exam 1: Monday, February 12   | 4:15 - 5:45 PM |
| ▪ Common Exam 2: Monday, March 19      | 4:15 - 5:45 PM |
| ▪ Common Exam 3: Monday, April 9       | 4:15 - 5:45 PM |
| ▪ Comprehensive Final Exam after May 3 | 2.5 hours long |

The final exam will emphasize the weeks of work after common exam 3, but also cover the whole course. In-class quizzes covering preceding or current work may also be given during lectures and/or recitations, and the grades may count toward your final course grade. There will be no make-up common exams.

**Missed Exams:** Students who miss a common exam will receive a score of zero for that exam unless they present a valid excuse within 7 days of the exam. Students with two or more missing, unexcused common exams automatically fail the course. Students expecting to be absent from a common exam should discuss their situation with their instructor PRIOR TO their absence. In order to qualify for a (rare) "make-up" common exam a student needs to document the reason for not being able to take the test as scheduled (for example, due to an exam conflict or documented illness). Under NJIT policy, the documentation should be presented to the student's Physics 121 instructor AND to the Dean of Students, both of whom must agree to permit a "make-up" exam. Conflict makeup common exams are usually held from 6:00 to 7:30 PM on the exam day.

## Course Policies

**Attendance** will be taken at all classes and exams. More than 3 unexcused absences (in total) is excessive. If you have excusable absences contact your instructor or the Dean of Students (973.596.3466, Room 255 Campus Center).

**Withdrawal:** If you must withdraw from the course, do it officially through the Registrar before the last withdrawal date. If you simply stop attending and taking exams your instructor will have to assign a course grade of "F".

**Honor Code Violations or Disruptive Behavior:** NJIT has a zero-tolerance policy for cheating of any kind and for disruptive student behavior. Violations will be reported to and judged by the Dean of Students. The penalties range from failure in the course plus disciplinary probation up to expulsion from NJIT. Avoid situations where your own behavior could be misinterpreted as dishonorable.

- Students are required to agree to the NJIT Honor Code on each exam.
- Turn off all phones, wireless devices, laptops, and messaging devices of all kinds during classes and exams.
- Please do not eat, drink, or create noise in class that interferes with the work of other students or instructors.

## Course Work

**The Class Schedule (page 4)** lists the topics covered, text readings, and homework assignments, exam dates, etc. week by week throughout the term. Some of the information may be tailored to your own section's schedule. Be sure to do the homework problems: it is almost impossible to succeed in physics courses without working a lot of

problems. It will not help to use someone else's solutions, although it sometimes helps to form study groups so long as there is real discussion and independent thought.

Each work unit begins with a lecture and includes a related homework assignment and perhaps some (optional) tutorials. The homework problems are usually covered in recitation class and the final submit deadline is about a week after material is introduced in lecture class.

- Read the assigned sections of the text before the lecture covering that material.
- Read the instructor's lecture notes before class (if provided) and bring them to class.
- Work on homework problems before they are covered in recitation and certainly before they are due.
- The Mastering Physics online system shows the applicable homework due dates.
- **Students who do not submit homework are automatically lowering their term average by 10 - 20%.**

**Practice Problems:** Two sets of solved "practice problems" (abbreviated "PP") are posted for each week. These are solved homework assignments from earlier textbooks. They are referred to as **PP01** for week 01, **PP02** for week 02, etc. You can find them under Spring 2018 Physics 121 on Janow's web site (<http://web.njit.edu/~janow>)

**Class Participation:** Students are expected to participate regularly in class discussions by asking and answering questions, participating in clicker exercises, working actively with others during in-class group assignments. When students participate in an active learning environment engagement increases, as does understanding of the material and success in the course.

### Specific Information for Mastering Physics (MP) homework system:

You will have to create an account on the MP system if you do not have one already. You can not sign up for the course your instructor sets up on MP until you have a valid Mastering Physics access code. So acquire one early and contact your instructor if this is a problem. Your instructor will announce a Mastering Physics course identifier for you to use when enrolling in your specific class. Use your NJIT email address as the logon ID for your account.

- The Mastering Physics login is <http://www.masteringphysics.com>. Click on "Student" in the upper left of the box. Respond "yes" that you have an access code (create an account if you do not already have one). Input your name exactly as it appears on NJIT's records: last name first, followed by a comma and your first and possibly middle name. Likewise, enter your 9 digit NJIT ID where indicated. .
- For your own reference, record the unique course number **MPPRODAN01456**, and your login ID and password. Instructors cannot access forgotten logins or passwords.

**Help:** If you are having trouble in this course visit or email your instructor; do not simply hope for a miracle and fall further behind. All instructors hold office hours (see their schedules) and will meet with students at other mutually convenient times.

### Tutoring:

The Physics Dept may provide drop-in tutoring on a regular schedule (to be posted). More information will be available from your instructor or the Physics Department office on the 4<sup>th</sup> floor of Tiernan after the term starts. Physics tutoring is also available through the Learning Centers.

### Academic Support and Students Affairs, Academic Advising Centers:

These organizations assist students who need to make academic decisions, sometimes needing support to progress toward successful graduation.

### Counseling:

The Center for Counseling and Psychological Services is committed to assisting students experiencing high levels of personal challenge and stress.
